Euryopis Menge, 1868 is the second most diverse genus of the subfamily Hadrotarsinae Thorell, 1881 (Hu *et al.* 2026; World Spider Catalog 2026). Levi (1954) and Levi & Levi (1962) revised this genus and proposed several synonyms, including *Acanthomysmena* Mello-Leitão, 1944, *Dipoenoides* Chamberlin, 1925, *Emertonella* Bryant, 1945, *Mufila* Bryant, 1949, among others. Yoshida (2002) revalidated *Emertonella* and noted that "all the species of the *Eu. emertoni* group designed by Levi (1954) belong to this genus", but did not formally transfer the species. Hu *et al.* (2026) formally transferred all species of the *Eu. emertoni* group, together with 16 additional species, to *Emertonella*, including *Em. scriptipes* (Banks, 1908), the type species of *Dipoenoides*. However, because *Dipoenoides* has priority over *Emertonella*, the use of the latter generic name by Hu *et al.* (2026) renders it invalid under the Principle of Priority (ICZN 1999: Art. 23). The aims of the current paper are to revalidate *Dipoenoides* and to transfer 35 species currently placed in *Emertonella* to *Dipoenoides*.

I thank Theo Blick (Hummeltal, Germany) for drawing our attention to this nomenclatural issue. This manuscript benefitted greatly from comments by Danniella Sherwood (University of Prishtina).
